

Agra has been implementing Plastic Waste Management (PWM) initiatives since 2022 to ensure scientific collection, segregation, processing, and disposal of plastic waste. Significant progress has been made through establishment of PWM units, strengthening door-to-door collection, segregation at source, and linkage with recyclers through authorized agencies. IEC activities and involvement of SHGs and Gram Panchayats have improved community participation.

However, challenges persist in residual blocks, including inadequate infrastructure, limited technical capacity, irregular collection, and constraints in O&M funding. Forward linkages with recyclers are also inconsistent in remote areas.
