

GWM:-

Under Swachh Bharat Mission (Grameen) Phase-II, significant progress has been made in implementation of Grey Water Management (GWM) systems in Agra district since 2020 through construction of soak pits, leach pits and community drainage structures in villages. Several villages have achieved partial saturation; however, challenges such as limited technical capacity, inadequate O&M mechanisms, land availability issues and low community awareness persist. The way forward includes covering residual villages through village action plans, capacity building of GPs, convergence with 15th Finance Commission funds, and community participation. Sustainable O&M will be ensured through GP-led management, user responsibility and regular monitoring.
